PROFESSIONAL SUMMARY

MSc Computer Engineering student specializing in Distributed Systems and Big Data Architectures. Hands-on experience in building scalable data pipelines (batch/streaming), database optimization, and cloud infrastructure. Currently seeking a **Data Engineering Master Thesis Internship** starting March 2027.

EDUCATION & TRAINING

University of Padua | *MSc in Computer Engineering (Big Data & Distributed Infrastructure)* | **2025 – Present**

- **Current GPA:** 29.5 / 30
- **Key Coursework:** Parallel Computing, Big Data, ML/DL, Distributed Systems, Graph DBs.

Ca' Foscari University of Venice | *BSc in Computer Science* | **2022 – 2025**

- **Final Grade:** 110/110 with Honors
- **Key Coursework:** Algorithms & Data Structures, Databases, Networks, Statistics.

Vrije Universiteit Brussel | *Erasmus+ Exchange Program* | **Sep 2024 – Feb 2025**

- **Key Coursework:** Scalable Data Management, Software Architectures.

ACADEMIC & PERSONAL PROJECTS

Retail Data Pipeline (End-to-End Lambda Architecture)

- Designed an end-to-end Lambda Architecture using a Medallion pattern (Bronze, Silver, Gold) to process real-time and batch retail transactions.
- Integrated **Apache Kafka** for the ingestion, **Apache Spark** for processing and **Apache Airflow** to orchestrate daily batch
- Replaced traditional RDBMS with a ClickHouse OLAP serving layer to reduce query latency for Grafana dashboards; implemented a Dead Letter Queue (DLQ) on MinIO (S3) to handle malformed data and guarantee exactly-once processing.

UFC Match Predictor (Data Engineering & ML Pipeline)

- Built custom web scrapers in **Python (BeautifulSoup)** to get unstructured historical combat data and fighter statistics.
- Engineered a robust preprocessing pipeline to clean, impute, and transform noisy, real-world data into predictive features.
- Evaluated supervised ML models (**XGBoost, Random Forest, SVM**) to predict match outcomes with data-quality-driven accuracy.

WORK EXPERIENCE

Wi-Care | *Co-Founder & Tech Lead* | **2026 – Present**

- Currently engineering an IoT system that uses mmWave radar technology to non-invasively monitor elderly guests in retirement houses and automatically detect dangerous movement.
- Selected among the **Top 10 business ideas** in **Start Cup Veneto 2026**; preparing for the National Innovation Award

Omega Gruppo | *Data Science Intern* | **June 2024 – September 2024**

- Designed optimized **SQL queries (CTEs)** to aggregate complex inventory and production data from relational databases.
- Built analytical dashboards to monitor material levels and corporate production efficiency KPIs.
- Implemented forecasting models using **Scikit-Learn** to predict future material demands based on historical trends.

Various Companies | *Customer Service & Operations* | **2022 – 2026**

- Developed strong soft skills, focusing on teamwork, communication, and dealing directly with customers.

TECHNICAL SKILLS

- **Distributed & Big Data:** Apache Spark, Apache Kafka, Apache Airflow
- **Programming & DBs:** Python, Scala, SQL, R, C++, Java, MongoDB
- **DevOps & Infrastructure:** Docker, Kubernetes, Git
- **Languages:** Italian (Native), English (C1)
